

Submission of Projects

Follow these steps to submit your project:

Create a folder named **Project#**.

Write your code using the **IDLE editor** and save it in the **Project#** folder.

Ensure your project follows the **Project Description**.

Run your code and verify that it produces the required outcome as specified in the project requirement documents.

Make sure your code includes proper documentation (comments, your name, date, and project number).

Refer to the attached **project requirements** and **project template** for guidance.

Zip the **Project#** folder.

Email the zipped folder to the instructor at mally@austincc.edu.

Subject line: *COSC 1336 (09) – Project#*

✓ Common Mistakes to Avoid

✗ Forgetting to include proper documentation in your code.

✗ Submitting only the code file instead of zipping the **entire Project# folder**.

✗ Using the wrong subject line in the email (must be: *COSC 1336 (04) – Project#*).

✗ Sending the project to the wrong email address.

✗ Not testing your code before submission (uncaught errors or missing output).
