

COSC 1336 – Fundamentals of Programming

Project Assignment #4 - Sum of Numbers

Overview:

Write a Python program that prompts the user to enter a **positive integer**. The program should **validate the input using a loop**, ensuring the user does not enter a negative or zero value.

Once a valid number is entered, the program will calculate and display all **odd integers** from 1 up to and including the entered number, as well as their **sum**.

Requirements:

- You **must use functions** in your program.
- At a minimum, your project should include the following functions:
 - `getIntegerData()` – This function should prompt the user and validate the entry of a positive integer.
 - `main()` – The main function that controls the overall flow of the program.
 -

Optional:

You are encouraged to add additional functions to enhance modularity and readability.

Reminders:

- Follow professional programming style.
- Include comments describing the purpose of each function.
- Validate all user input appropriately.
 - Only positive integers will be accepted (more than 0)

Sample Output

Sample Output (user entries displayed in red)

Project #4

Written by: Ally Baba

User's Entry

Enter a positive integer: **15**

Summary: Sum of Positive Odd Integers

The numbers are

1
3
5
7
9

COSC 1336 – Fundamentals of Programming Project Assignment #4 - Sum of Numbers

11
13
15

The sum of odd integers between 1 and 15 is 64
