

COSC 1336 – Fundamentals of Programming Project Assignment #7 - Create Identity
--

Overview

Write a Python program that asks the user to enter their **last name, first name, Social Security Number (SSN), number of dependents, wage and employee ID** . The program will then generate and display:

1. The user's **initials** (first letter of first name + first letter of last name).
2. The user's **email address** in the format: <first initial><lastname>@domain.com.
 - Example: John Smith → jsmith@domain.com
 - You may use a placeholder domain like @example.com.
3. The **last 4 digits of the SSN**.
4. The wage if formatted 2 decimal places with a \$ sign
5. The number of dependents is **between 0 and 10 (inclusive)**
6. **The employee ID** is the last name, a dot and the last 4 digits of SSN

Functional Requirements

Your program **must use functions**. Include the following required functions:

- **getStringData()** – Validates and returns a non-empty string from user input.
- **getFloatData()** – Validates that the wage is greater than 0.
- **getIntegerData()** – Validates that the number of dependents is greater than or equal to 0.
- **displayResult()** – Accepts the required values and displays the final output, including initials, email, and the last 4 digits of the SSN.
- **validateSSN()** – Accepts the SSN entry and checks whether it is in a valid format (xxx-xx-xxxx). Returns TRUE if valid and FALSE if not. If TRUE, the last 4 digits of the SSN are extracted and displayed in main(). If FALSE, the user is prompted to re-enter the SSN.
- **main()** – Controls the overall program logic.

Optional Enhancements

- Validate that SSN is a 9-digit number.
- Allow flexibility in formatting the email domain (optional input or preset constant).

Programming Style Requirements

- Use meaningful variable names.
- Follow standard code formatting practices.
- Include documentation at the beginning of the file and above each function.

Sample Output

Sample Output (user entries displayed in red)

Project #7

Written by: Ally Baba

Lottery Commissioner's Entry

Employer Information

Last name	Smith
First name	John
SSN (ex. 111-23-3333):	123-45-5678
Number of dependents:	2
Wage: \$	10.00

Summary: Create Identity

The Employer's

Name:	John Smith
User's initial:	JS
Email address:	jsmith@gmail.com
Last 4-digit of SSN:	5678
Number of dependents:	2
Wage: \$	10.00
Employee ID:	smith.5678
